

William Thomas

✉ whthomas22@gmail.com | 📍 Pittsburgh, PA | 🔗 <https://williamthomas.name>

Driven and detail-oriented Cybersecurity Analyst with a strong foundation in both defensive and offensive security. Experienced in identifying and exploiting system vulnerabilities through platforms like TryHackMe and real-world Capture The Flag events at BSidesPGH. Skilled in deploying and managing security infrastructure, including cloud-hosted SIEM solutions such as Wazuh, Linux hardening, and SSH configuration.

Experience

Meta – Reality Labs

IT ANALYST

October 2021 – Present

- Support Reality Labs' research staff by resolving endpoint issues across Windows, macOS, Linux, and mobile platforms
- Provision high-performance Lambda workstations per spec requests, configuring imaging pipelines, security policies, and remote access tools for AI/VR workloads
- Managed mobile devices and MDM policy configurations to enforce compliance across iOS and Android platforms
- Track and triage tickets through Salesforce ticketing systems, collaborating with cross-functional teams

VLN Partners

TECHNICAL SUPPORT ANALYST

May 2020 – December 2020

- Led remote support efforts for multiple school districts during peak pandemic operations
- Maintained and secured infrastructure including AD user accounts, network printers, and access control systems
- Imaged and deployed endpoints implementing BitLocker encryption, local policy enforcement, and automated patch installation
- Troubleshoot authentication and connectivity issues across Windows-based systems

Chevron

IT DESKSIDE SUPPORT ANALYST

March 2019 – May 2020

- Provided Tier 2 support across enterprise and field environments, resolving endpoint, software, and connectivity issues
- Delivered on-site technical support by traveling to remote oilfield rig sites to troubleshoot critical infrastructure
- Managed ServiceNow ticket queues for system access, security configuration, and vulnerability remediation
- Configured and imaged endpoints enforcing Windows 10 hardening, software access controls, and device encryption
- Saved Chevron thousands by identifying a scalable fix for headset battery failures—proposing \$5 battery replacements instead of \$200 device swaps

Continuum

HELPDESK TECHNICIAN

September 2018 – February 2019

- Resolved 15–20 daily support tickets via chat and remote access tools
- Addressed antivirus and security software issues, helping users mitigate malware infections
- Configured and supported endpoint devices ensuring security updates and access controls were consistently applied
- Documented issue trends and resolutions improving knowledge base entries

Education

Udemy

SELF-DIRECTED IN CYBER SECURITY STUDIES

Grade: **Albert Gallatin Area High School**

DIPLOMA IN GENERAL STUDIES

Grade:

Skills

Security Tools	Wazuh, Splunk, Nmap, Wireshark, Burp Suite, Metasploit
Offensive Security	TryHackMe, CTF Competitions, Penetration Testing, OSINT Techniques
Cloud & Infrastructure	Linode, AWS Basics, Docker, Nginx
System Administration	Linux, Windows, Active Directory, Endpoint Hardening
Scripting & Automation	Python, Bash, PowerShell
Identity & Access	IAM, PKI/SSL/TLS, SSH Configuration, MDM

Projects

- Wazuh SIEM Deployment** 
Deployed a Wazuh SIEM instance on a cloud-based Ubuntu server to monitor host activity, detect threats, and simulate SOC workflows. Hardened the system by disabling unnecessary services, enforcing key SSH policies, and applying updates. Used Bash scripting to automate agent installation and registration across endpoints.
- Linux Log Monitoring & Alerting Lab** 
Created a lab environment to simulate host-based intrusion detection using native Linux log files. Configured rsyslog to centralize system logs and used custom Bash scripts to monitor authentication logs for suspicious behavior such as failed SSH attempts, root access, or account lockouts.
- Offensive Security Labs & CTF Participation** 
Completed 150+ offensive security labs on TryHackMe, including Blue, Vulniversity, and Ice. Participated in the BSidesPGH CTF event, applying red team tactics in a real-time environment.
